How we do

Analysis

Before we start working on a project, our designers measure the object. The technical assignment is drawn up directly at the facility with the customer, where we discuss each stage in detail.

Layout

The layout is the skeleton of the interior design future, so at this stage it is necessary to think over everything from the large of picture to the smallest details.

Concept

Before we start working on visualization, we select analogs in a given style direction. Which we analyze and discuss in details in a personal meeting in order to determine style and customer needs.

Design

The whole team takes part in the work on the sketches, everything is carefully well-thought out, discussed, and then finalized. Only after that ready-made 3D visualizations are shown to the customer.

Supervision

In the process of implementation, there are always tasks: to make changes to the project, to change orders such as materials and furniture.
